

KPMG Capstone Weekly Update

2024.3.27

Update

1. Iteration 1: Naive Model
2. Iteration 2: 3-layer Prompt Engineering GPT Model
3. Iteration 3: Untuned Model + Streamlit setup
 - Back and forth questions
 - <https://capstone-kpmg-chatbot.streamlit.app/>
4. Performance Metrics Comparison

Use Cases

1. Use Case 1: Simple Extraction (one entity)
2. Use Case 2: Simple Extraction (two or more entities)
3. Use Case 3: Complex Extraction with WHERE Clause
4. Use Case 4: Find Relationships
5. Use Case 5: YES/NO Verification Problem

<https://docs.google.com/spreadsheets/d/1MIEyXIJGTAw80rXpV-S9c8Gahxqouj6ykOwSm1t7N4U/edit#gid=0>

Performance Metrics

1. **Accuracy** for response: (correct answer:1, incorrect answer:0)

https://docs.google.com/spreadsheets/d/13pAL-CoYBonbjFMU1apB_iwk-cMWQX1V1ZSlv6zS8ms/edit#gid=0

2. **Consistency** for response: we plan to run the same question 5 times and see whether the answers generated are similar/same. However, due to budget constraints, we have not yet initiated this phase of the project.

Challenges

1. Definition of Performance metrics, such as Robustness
2. back-and-forth improvement, such as
 - a. chatbot questioning (I don't understand → I don't understand, do you mean xxx?
 - b. previous question references (Q: Can you provide information for the previous model?)
 - c. question synonym or misspelling
(To answer question like "who is the author/owner/maintainer of the model?")

Next week Plan

1. Tune the iteration 3 model and test the performance
2. Automate the testing pipeline

Our Questions

- In the roadmap, what do you expect us to do about the Visualization part?
- Any advice on testing the performance?
- Business case
